

Eight Steps to NFPA® 70B Standard Compliance!

Step-by-Step

The 2023 edition of the NFPA 70B marks a significant shift from a recommendation to an enforceable standard, becoming a key driver of electrical maintenance and safety in the U.S. This transition enables improved inspection methods and equipment recommendations. Use the following eight steps to align your operations with this pivotal standard:

1. Designate an Electrical Maintenance Program (EMP) Coordinator
2. Conduct an Initial Electrical Infrastructure and Equipment Condition Assessment
3. Update Single-Line Diagrams (SLDs)
4. Perform Remediation Identified by Assessments
5. Determine Maintenance Intervals and Scope
6. Update EMP to Verify Compliance Requirements
7. Audit Your EMP Every Five Years or Less
8. Embrace Digitization and Digitalization

You can smoothly navigate your step-by-step compliance journey by signing up for an EcoCare Service Membership, where we become your partner in preventative maintenance, modernization, and code compliance. We believe in empowering every business to get the most out of their electrical equipment and to mark advancements in electrical safety and maintenance.
